

Tele-Medicine

Tele-visits

We are now offering Tele-visits effective immediately (and during the COVID-19 National Public Health Emergency), in the form of virtual visits. Tele-visits have become an important tool for healthcare providers allowing us to offer services to our patients when in person visits are not practical or possible.

What do you need to have a virtual visit with a provider?

- An iPhone, Android phone, Desktop or Laptop Computer (Mac or PC) with a camera
- Secure reliable internet connection or telephone connection

The good news is, most of us have everything on this list in the form of a smartphone, iPad or Android tablet, laptop computer, or in many cases, a desktop computer. If the connection is bad, we can simply speak to you over the telephone.

To take advantage of the tele-visits service, simply call the office book your appointment today at (863) 508-1101.
