

Venous Reflux Studies

A Venous Reflux Study checks for reverse blood flow in veins in the legs. The venous Doppler test may be ordered if a patient exhibit any of the following symptoms:

- Enlarged veins
- Swelling in your legs
- Fatigue
- Hyperpigmentation
- Leg ulcers
- Scaly legs
- Rough, hardened skin on legs

How should you prepare?

- There is no preparation for this procedure.
- The test takes approximately 30 minutes.
